

**1 litre
concentrate**

makes 8 litres

Deep penetration to neutralise embedded salt

EASY Efflorescence Destroyer

Neutralises SALT STAINS from new brickwork and paving to give long lasting results

**FOR EXTERNAL SURFACES
PROFESSIONAL GRADE**

Salt stain neutraliser for walls, paths, block driveways

Granite and Marble friendly

Easy to use, low odour

Easy rinsing

Contains no hydrochloric or citric acids

- **EASY Efflorescence Destroyer** is a concentrate designed to neutralise salt deposits from walls, paving, paths and block driveways
- Designed as a long term solution to a difficult problem, this non-acid product penetrates the substrate to make the salts water-soluble. These can then be washed away naturally or removed with a power washer
- Unlike traditional acid removers which dissolve the surface making it more porous, **EASY Efflorescence Destroyer** does not attack the substrate
- Apply only to the affected area using a garden spray, watering can or brush. Leave for at least 1 hour to act then re-apply. Leave for 24 hours to allow deep penetration and neutralisation of the salts. After 24 hours wash the surface with a power washer or hose and a stiff brush
- Concentrate makes 8 litres of product cleaning up to 20 sq meters making it **great value for money**
- **NOTE:** Not all white deposits on substrates are efflorescence. This product will not dissolve harder calcium deposits or lime wash; for these problems use **EASY Mortar Stain Remover**
